

WORKSHOP GUIDE

ODM Adoption Workshop

Treat adoption as a bounded learning loop

Outcome-Driven Management

Workshop objective

Select one bounded ODM adoption bet and define the evidence needed to decide whether to continue, adapt, scale, or stop.

1. Establish a baseline

Use the assessment and maturity model to identify observable strengths and constraints. Avoid turning maturity into a ranking.

2. Select the adoption outcome

Choose a management behavior that, if improved, would materially help an important outcome or decision environment.

3. Frame the adoption bet

State what will change, why it should matter, what evidence will show progress, and what investment boundary applies.

4. Design the experiment

Choose one team, initiative, or leadership review. Keep the first loop narrow enough to learn quickly.

5. Define the decision point

Set the review question and possible decisions: continue, adapt, scale, or stop.

Workshop canvas

Outcome What observable management behavior should improve?	Bet What change do we believe will create that improvement?
Evidence What would increase or decrease confidence?	Decision What choice will the evidence inform?

Boundary

Where and for how long will this adoption experiment run?

Learning

How will insight be captured and reused?

Use note

This is a proposed ODM resource and discussion aid. Adapt it to context. It is not a certification, validated benchmark, or substitute for organizational policy.
