

ADOPTION MODEL

ODM Maturity Model

From activity-driven management to learning-centered behavior

Outcome-Driven Management

A developmental model

Maturity is a profile, not a ranking. Different teams may display different behaviors. The model is intended to identify the next useful capability to strengthen.

Level 1 — Activity Driven

Work completion is the primary signal. Next: define one measurable outcome.

Level 2 — Metrics Driven

Data is visible, but links to outcomes and decisions are inconsistent. Next: identify actionable signals.

Level 3 — Evidence Driven

Bets are tested and evidence changes some decisions. Next: establish recurring learning loops and decision ownership.

Level 4 — Outcome Driven

Outcomes organize investment, engineering, and leadership attention. Next: connect learning across teams.

Level 5 — Learning Centered

Learning and adaptation operate as durable capabilities. Continue protecting learning speed, evidence quality, and institutional memory.

Assess across dimensions

Outcome clarity

Can people explain meaningful success?

Bet quality

Are beliefs explicit and bounded?

Evidence quality

Do signals change understanding?

Learning speed

How quickly is uncertainty reduced?

Decision quality Does learning become timely action?	Engineering contribution Are value, velocity, quality, and trust balanced?
Leadership effectiveness Does leadership remove obstacles and align resources?	Transparency Are priorities, dependencies, risk, and decisions understandable?

Use note

This is a proposed ODM resource and discussion aid. Adapt it to context. It is not a certification, validated benchmark, or substitute for organizational policy.
