

PARTICIPANT WORKBOOK

ODM Adoption Workshop

Establish a baseline and frame the first adoption bet

Outcome-Driven Management

Workshop purpose

Create a shared, evidence-based picture of current management behavior before selecting an ODM adoption bet. The exercises produce a baseline that can be revisited after an experiment.

Use note: This workbook is a proposed discussion aid, not a validated assessment or organizational certification. Describe observable behavior. Avoid scoring individuals or teams.

Workshop outputs

- Current Management Behavior Map
- Outcome Clarity Snapshot
- Signal Inventory
- Decision Flow Reflection
- Leadership Attention Profile
- Baseline Summary and ODM Adoption Bet

Working agreements

- Use specific examples rather than general opinions.
- Separate what is observable from what is intended.
- Treat gaps as opportunities to learn, not evidence of failure.
- Do not attribute findings to named individuals.
- End each exercise with one implication for the management system.

Exercise 1

Observable Behavior Inventory

Identify the recurring management behaviors that shape attention, learning, and decisions.

Suggested: 25 minutes

Individual → Small group → Plenary

Step 1 — Inventory

List recurring management behaviors, forums, reviews, and artifacts. Examples may include planning reviews, status reports, customer feedback reviews, engineering health reviews, escalation forums, or portfolio reviews.

Behavior / forum / artifact	Primary focus	Observed effect

Primary focus codes

A Activity O Outcome E Evidence D Decision L Learning

Exercise 1 synthesis

Step 2 — Pattern recognition

Which behaviors consume the most collective time?

Which behaviors produce the clearest outcome understanding?

Which behaviors create useful evidence or learning?

Which behaviors reliably end with a decision?

What behavior should be reduced, redesigned, or stopped?

Exercise output: Current Management Behavior Map and one behavior to examine more deeply.

Outcome Traceability Test

Test whether one important initiative has a shared, measurable definition of success.

Suggested: 25 minutes

Individual → Small group → Plenary

Initiative or investment

Intended outcome: What must become different?

Beneficiaries: Who experiences the change?

Customer impact

Business or operational impact

Leading indicator(s)

Lagging proof

Outcome clarity check	1	2	3	4
Shared understanding across participants	☐	☐	☐	☐
Measurable meaningful change	☐	☐	☐	☐
Evidence can influence the next decision	☐	☐	☐	☐

What clarification would most improve the outcome?

Exercise output: Outcome Clarity Snapshot and one clarification action.

Exercise 3

Evidence Audit

Separate actionable signals from reporting noise and identify evidence gaps.

Suggested: 30 minutes

Individual → Small group → Plenary

Information currently reviewed	Signal / noise / unknown	Decision affected	Gap or action

Which information should be stopped, simplified, or combined?

What evidence is missing for the next important decision?

Exercise output: Signal Inventory with stop, keep, and add decisions.

Exercise 4

Decision Flow Analysis

Study one recent decision to reveal ownership, evidence, latency, and adaptation gaps.

Suggested: 30 minutes

Individual → Small group → Plenary

Decision examined

Decision owner

Trigger: What made the decision necessary?

Evidence available

Evidence missing

Decision elapsed time

What happened after the decision?

Reflection	Yes	Partly	No
Ownership was clear	☐	☐	☐
Evidence was sufficient for the decision	☐	☐	☐
The decision happened at the right time	☐	☐	☐

The decision established the next evidence	[]	[]	[]
--	----	----	----

One change that would improve this decision flow

Exercise output: Decision Flow Reflection and one improvement action.

Exercise 5

Leadership Attention Profile

Compare where leadership attention goes today with where attention would most improve outcomes.

Suggested: 25 minutes

Individual → Small group → Plenary

Decision Center domain	Current attention (total 100)	Desired attention (total 100)	Why the gap matters
Strategic Outcomes			
Execution Health			
Engineering Excellence			
Customer Signals			
Organizational Effectiveness			
Total	100	100	

Where is leadership attention over-allocated?

Where is leadership attention under-allocated?

What one review or behavior should change?

Exercise output: Leadership Attention Profile and one attention-shift experiment.

Exercise 6

Baseline Summary and Adoption Bet

Synthesize findings into one bounded learning experiment.

Suggested: 30 minutes

Individual → Small group → Plenary

Current strengths

Current constraints

Most important learning opportunity

Draft the adoption bet

We believe that [specific management behavior change] **will improve** [outcome or decision capability] **as measured by** [observable evidence] **within** [bounded context and review period].

Our adoption bet

Evidence to collect

Decision point and owner

Workshop takeaway: A shared baseline and a bounded ODM adoption bet ready for the next learning loop.

Personal takeaway

The most important thing I learned

What I will do differently

What support or decision I need

Team follow-up

At the next review, revisit the baseline artifacts. Ask what changed in behavior, what evidence was observed, and what decision should follow.

Remember: The baseline is not a grade. It is the evidence needed to choose the next useful improvement.

Reference principles

- Outcomes over activity
- Signal over noise
- Continuous situational awareness
- Rapid decision making
- Accountability with transparency
